

Virtual Rape (LambdaMOO)

Yes Bungle did wrong because Bungle entered LambdaMOO and used a subprogram Voodoo doll, to take control of other characters and engage in sadistic actions. What Bungle did is offensive and unethical. Bungle is responsible for the unethical act and also the programmers who create LambdaMOO because there should be a defensive software tools to filter malicious acts and also implement rules to follow so that if anyone will go against the rules, there is a specific consequence for the act done.
